Visual Studio (VS) Code

- ▶ Once installed, go to the “Extensions” tab and search “Python”
- ▶ Install the below extensions:

Anaconda

- ▶ A tool for configuring Python **environments**
 - ▶ More often than not, you need to install **packages** that allow you to code more easily/efficiently
 - ▶ Allows for version control
 - ▶ Issues can arise if environments are not used, for example:
 - ▶ If you install two packages that conflict with one another
 - ▶ If you install a package that requires a specific version of Python
 - ▶ Anaconda allows these issues to be isolated to a specific environment, rather than affecting your whole Python installation
 - ▶ Especially useful if you have more than one project going on

Anaconda

- ▶ Installation link: <https://www.anaconda.com/download>
- ▶ The simplest way to use Anaconda is via the **Navigator**
- ▶ To install:
 1. Make an account
 2. Install the full distribution via the “Graphical Installer”

▶ Installation link: <https://www.anaconda.com/download>
